**great new ideas on
doors & handles**

New colours, new branding and positive attitude - that was Venjakob's Ligna 2009 strategy to see out the recession. And judging from the number of innovative machines on show, the UK representatives, Miller Associates, had plenty of reasons to be positive too.

The new sanding and de-nibbing machine, Ven Brush Hybrid, incorporates all the advantages of wide belt sanding and brush sanding in one machine and it's ideal for the sanding and de-nibbing of cabinet doors, length and cross-wise profiles and flat surfaces.

The all new Ven Spray Duo was also making its debut at Ligna 2009. Newly designed, this auto spraying machine handles all new paint technologies and offers line speeds of up to 20m/min with reduced maintenance, faster cleaning times and high energy efficiency.

Venjakob offers a full range of drying systems and on show were the latest OIR and redesigned UV driers. The OIR uses IR systems which are tuned to the exact wavelength to remove water from lacquers and also incorporates humidity control to stop lacquer surfaces prematurely skinning while the Ven Dry UV surround enables surfaces and edges to be cured by means of a newly developed reflector - all with a cooler cure and just one lamp.

Above: The very latest Ven Dry UV enables surfaces and edges to be cured by means of a newly developed reflector. The IR portion of the light is greatly reduced, giving a cooler cure. This highly efficient system enables the curing of clear lacquers with only one lamp, thus providing significant energy savings.

Below: Venjakob's Hybrid Brush is a modular machine which offers five different sanding aggregate options and a clutch system for quick change of brushes. Operation is made easy with a touch screen. It's called a Hybrid because it offers both belts and brushes.

Below: Running at speeds of up to 20m/min, the newly designed Ven Spray Duo offers retroactive expandability. Latest developments include a redesigned fresh air supply, larger filters, precise air management in the spray cabin area, a redesigned belt cleaning and lacquer recovery system and fast changeover from one lacquer to another.
